BENCH AMBURGO WITH BACKREST

AP036S

Finitura /Finishing

GALVANIZED AND PAINTED

Bench Amburgo with backrest has a structure in galvanized and powder coated steel, composed by two supports in laser-cut steel sheet 8 mm thick, to which are welded drilled base plates for the anchoring to the ground with bolts.

The seat is made of timber slats, which are fixed to specific metal plates through screws.

The timber parts of the bench (seat and backrest) are made in pressure treated pine wood; according to DIN 68800-3 norms, this treatment protects the wood from moulds, fungi and atmospheric agents. On request, wooden slats can be supplied in hardwood. A central steel reinforcement is fixed to the seat and to the backrest, in order to give greater stability and linearity to the slats.

All metal parts are galvanized and powder coated in different RAL colours.

All screws are in stainless steel.

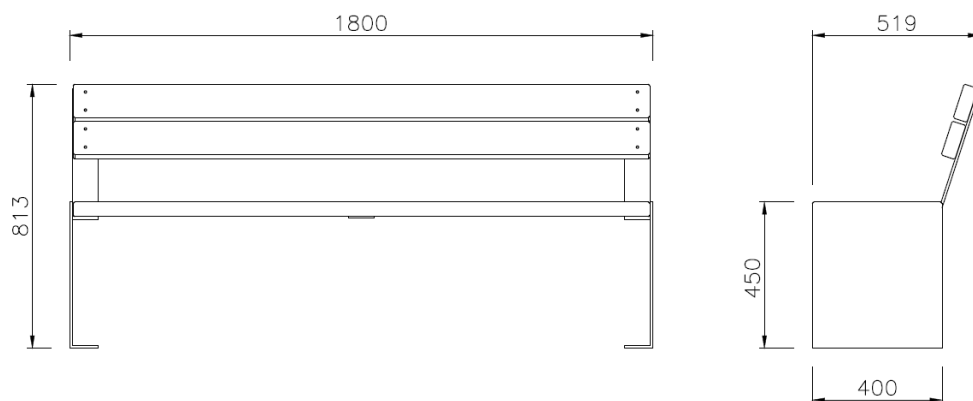

TECHNICAL INFORMATION

Dimensions L.1800x519 mm

Height H. 813 mm

Estimated weight 66 kg
