**LITTER BIN FLY 3 SECTORS + OPTIONALS**

**AC017/AC017A**

Finitura /Finishing

**GALVANIZED AND POWDER COATED**

Litter bin Fly was conceived for the separate collection of waste and to be installed in big structures such as airports, malls etc. Its cylindrical outer structure is made in pierced, clendered, 2-mm-thick steel sheet, with a 3-mm-thick steel sheet bottom, laying on a plate, calendered, 50x50 mm circular base.

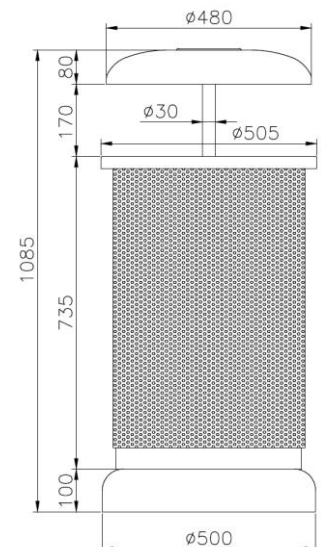

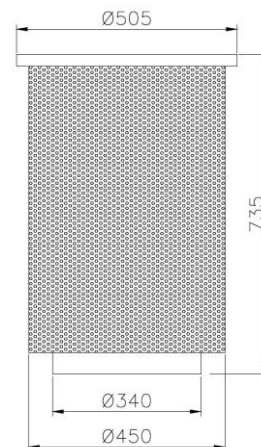

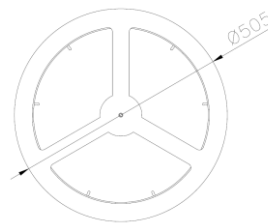

The container is internally divided in 3 sectors, thanks to steel sheets in 15/10 thickness, which are welded to a central support made with a Ø30 MM tube; each sector is provided with a ring for the sack in steel drawn with 6 mm thickness.

The openable lid is realized in 20/10-thick, laser-cut steel sheet and it is finished with galvanization and liquid painting in 3 colours and with writings, in order to divide the different kinds of trash. All screws are in stainless steel.

When it is not provided with upper lid, placement indoor is advisable. If required, it can be provided with concrete base or with base for fixing to the ground with bolts and it can be supplied with an upper lid, with removable ashtray.

## TECHNICAL INFO

Dimensions	Ø505 mm
Height	735 mm
-Bin weight:	36 kg
-Concrete base weight:	+ 50 kg
-Upper lid weight:	+ 4 kg
Packaging	
Capacity:	120 L
