SHELTER COVER BIKE

AT011B/C

Finitura /Finishing

GALVANIZED AND PAINTED

Modular covering composed of four columns in rectangular tube 150x50, 3 mm thick, joined by laser-cut steel sheet 5 mm thick. The roof is made of 10 mm thick honeycomb polycarbonate, supported by 50x30 mm tubular stringers fixed to the lateral sides by means of screws and aluminum profiles with sealing gaskets. At the rear, the roof is provided with a 15/10 thick press-bent sheet metal gutter, suitable for collecting and draining water. It is fixed to the ground by means of a base plate 250x150, 15 mm thick, with 4 holes \varnothing 20 mm for anchoring with expansion plugs or anchor bolts. The bike rack can be fixed laterally directly to the supporting columns of the roof using screws or, if desired, another type of bike rack can be inserted with ground fixing. On request, the rack can be supplied with a transparent polycarbonate back wall or perforated sheet metal. All metal parts are hot-dip galvanized and painted with thermosetting polyester powder in RAL colours. Stainless steel screws are supplied.
